
EDUCATION

• Indian Institute of Technology

Kanpur, India

• Dual Degree(BTech + Mtech)

July 2009 - May 2014

EXPERIENCE

- **Technical Architect** (promoted from Staff and Lead) *at Apna, Bangalore* *Nov 2021 - Present*
 - **Job Post, Canvas & Verification:** Golang, JAVA, Django, Postgres, MongoDB, Elasticsearch
 - Designed idempotent job posting flows to prevent partial payment failures, ensuring reliability and employer trust
 - Built a rule-based engine for candidate eligibility, enabling dynamic, DB-driven conditions avoiding redeployment
 - Reduced failures in AI calling agent screening workflows from 6% to 0 by setting up alerts & fixing key issues
 - **Payment Systems:** Golang, MongoDB, Redis, PubSub
 - Redesigned debit/credit flows, achieving 100% drop in account inconsistencies and improving system auditability
 - Reduced peak load on DB by 60% by consumer isolation and delayed execution, cutting monthly infra costs by \$2000
 - **Platform Engineering & Culture:** Golang, MongoDB, Postgres, RabbitMQ
 - Defined platform taxonomy and built SkillGraph, the core shared service powering job posting & recommendations
 - Led SLO adoption & built cron alerting framework; focused on action based alert & monitoring thus reducing noise
 - Optimized PostgreSQL queries to reduce load by 30% on a key replica, resulting in \$1000 monthly cost savings
 - Mentored engineers across teams, establishing best practices in design, event-driven patterns and observability
- **SDE IV at Cleartax, Bangalore** *Sep 2020 - Nov 2021*
 - **GST:** JAVA, Node JS, MySQL, SQS, Kafka
 - Working on reporting service re-architecture by empirically comparing performance stats across different designs
 - Introduced redis based queue to enable report generation for over 1M records and setup monitoring for scaling
 - Implemented *Clean Architecture* with SOLID principles and introduced DI without container for better testability
- **Engineering Lead at Circle Internet, Bangalore** *Feb 2019 - June 2020*
 - **Hyperlocal social network:** Node JS, MongoDB, FFmpeg
 - Built collaborative video editor to automate news creation(6K/day) using ffmpeg & redis queues with HLS streaming
 - Enhanced open source tus library to improve uploading performance by fixing multi process bug using redis for state
 - Setup monitoring and improved app performance by 50% after establishing and removing database/code bottlenecks
- **Co-founder at Proble pvt Ltd, Bangalore** *Aug 2018 - Jan 2019*
 - **Question bank with adaptive teaching:** React JS, Node JS, MongoDB
 - Conceived & built platform for institutes to digitize assignments, track student performance & insights to teachers
 - **Student learning app with adaptive learning:** React JS, Node JS, MongoDB
 - Assessed students and evaluated proficiency matrix to generate personalized feedback and practice assignments
- **Software Development Engineer II at Ola, Bangalore** *June 2015 - Aug 2018*
 - **Self Onboarding Platform for partners** (Team Lead): Node JS, MongoDB
 - Designed and developed extensible configuration driven onboarding service to accelerate new country/city launch
 - **Partner onboarding platform for Agents** (Team Lead): Node JS, MongoDB
 - Initiated, designed and implemented extensible authorization framework to allow/restrict access to resources
 - Orchestrated 3rd party integration to facilitate aadhaar authentication, device loan and vehicle/partner verification
- **Associate Software Engineer at Misys Financial Software, Bangalore** *June 2014 - June 2015*
 - **Trade simulation game:** JAVA, Node JS, SQL Server
 - Devised matching engine algorithm, login system, used Raphael to visualize data for watchlist and portfolio

M-TECH THESIS

- **Safest route formalization for overweight consignment transportation** *May 2013 - May 2014*
 - Computed road costs by merging bridge data with OSM and rendered safest routes using Dijkstra & OpenLayers

Technical Expertise: Golang, Python, JavaScript, Java • Django, Node.js • PostgreSQL, MongoDB, Redis
